Environmental Committee Minutes – October 20th, 2010

First off we had two interesting presentations by students. CO-OP housing was described and we will be looking into ways of how to incorporate this idea here at the University. The second presentation was given by a representative from Epoche stating ways of decreasing our energy use through technology. We will be addressing the IT services to make sure computers and such are off when not in use.

Secondly we discussed the wind turbine proposal being proposed by MSSA. We also brainstormed our goals we have; bike friendly campus, MSU becoming a fair trade campus, community garden on campus and converting containers on campus to a more sustainable material.
